Individual Development Plan for Graduate Students

Individual Development Plans (IDPs) provide a planning process that identifies both professional development needs and career objectives. Furthermore, IDPs serve as a communication tool between individuals and their mentors. While IDPs have been incorporated into performance review processes in many organizations, they have been used much less frequently in the mentoring of graduate students. An IDP can be considered one component of a broader mentoring program that needs to be instituted by all types of research institutions.

Goals
Help individuals identify:
- Long-term career options they wish to pursue and the necessary tools to meet these goals.
- Short-term needs for improving current performance.

Benefits
Graduate students will have a process that assists in developing long-term goals. Identifying short-term goals will give them a clearer sense of expectations and help identify milestones along the way to achieving specific objectives. The IDP also provides a tool for communication between the graduate student and a faculty mentor.

Outline of IDP Process
The development, implementation and revision of the IDP requires a series of steps to be conducted by the graduate student and his/her mentor. These steps are an interactive effort, and so both the graduate student and the mentor must participate fully in the process.

BASIC STEPS

Execution of the IDP Process

... for Graduate Students

Step 1. Conduct a Self-Assessment

- Assess your skills, strengths and areas which need development. Formal assessment tools can be helpful. (Examples can be found in Resources: Self Assessment at the end of this document).
- Take a realistic look at your current abilities. This is a critical part of career planning. Ask your peers, mentors, family and friends what they see as your strengths and your development needs.
- Outline your long-term career objectives. (For useful information see Resources: Career Opportunities at the end of this document). Ask yourself:
  - What type of work would I like to be doing?
  - Where would I like to be in an organization?
  - What is important to me in a career?

Step 2. Survey Opportunities with Mentor

- Identify career opportunities and select from those that interest you.
- Identify developmental needs by comparing current skills and strengths with those needed for your career choice.
- Prioritize your developmental areas and discuss with your mentor how these should be addressed.

Step 3. Write an IDP

The IDP maps out the general path you want to take and helps match skills and strengths to your career choices. It is a changing document, since needs and goals will almost certainly evolve over time as a graduate student. The aim is to build upon current strengths and skills by identifying areas for development and providing a way to address these.

The specific objectives of a typical IDP are to:

- Establish effective benchmarks and target dates for the duration of your graduate training.
- Identify specific skills and strengths that you need to develop (based on discussions with your mentor).
- Define the approaches to obtain the specific skills and strengths (e.g., courses, technical skills, teaching, supervision) together with anticipated time frames.
- Discuss your draft IDP with your mentor (and DGS).
- Revise the IDP as appropriate (e.g., semiannually).

Step 4. Implement Your Plan

The plan is just the beginning of the career development process and serves as the road map. Now it’s time to take action!

- Put your plan into action.
- Revise and modify the plan as necessary. The plan is not cast in concrete; it must be modified as circumstances and goals change. The challenge of implementation is to remain flexible and open to change.
- Review the plan with your mentor regularly. Revise the plan regularly on the basis of these discussions.
Execution of the IDP Process (cont.)

... for Mentors

Step 1. Become familiar with available opportunities

- By virtue of your experience you should already have knowledge of some career opportunities.
- But you may want to familiarize yourself with other career opportunities and trends in job opportunities.
- Refer to sources such as National Research Council reports and Science career reviews; see also Resources: Career Opportunities at the end of this document.

Step 2. Discuss opportunities with graduate student

- This needs to be a private, scheduled meeting distinct from regular research-specific meetings or thesis committee meetings.
- There should be adequate time set aside for an open and honest discussion.

Step 3. Review IDP and help revise

- Provide honest feedback, both positive and negative, to help graduate students set realistic goals.
- Agree on a development plan that will allow graduate students to be productive in their research and adequately prepare them for their chosen career.

Step 4. Establish regular review of progress

- The mentor should meet at regular intervals with the graduate student to assess progress, expectations and changing goals.
- On at least an annual basis, the mentor should conduct a performance review designed to analyze what has been accomplished and what needs to be done.
- A written review should be included to objectively document accomplishments.

This document was adapted from a document prepared by the Science Policy Committee of the Federation of American Societies for Experimental Biology (FASEB).
